Comments
Too many information through videos and websites. A lot of challenges
One of the main strengths of the course is the strong focus on hands on learning. We are not just learning theory we actually practice and apply what we learn through exercises and assignments, which helps us understand the concepts better.
Another strength is the teacher's support. The instructor is very approachable and willing to take the time to help students. They make sure we understand the lessons and are patient when we have difficulties, which makes a big difference, especially for beginners.
Overall, the combination of practical learning and a supportive teacher creates a positive and effective learning environment.

Please identify one or more areas where you think the course could be improved.

Comments
Videos could be updated because we faced a lot of difficulties due to small changes of version. Some directives seems simple but was in a higher level of C# users.

Comments
Really welcoming, knowledgeable, and helpful!
Very knowledgeable
One of the main strengths of the instructor is her willingness to help students. They take the time to explain lessons clearly and make sure everyone understands, especially when topics are difficult.
Another strength is their patience and approachability. It feels comfortable to ask questions, and they are always open to guiding students step by step, which is very helpful for beginners.
The instructor is also supportive and encouraging. They understand that some students are still learning the basics and provide guidance without making it overwhelming, which helps build confidence in learning the course.

Please identify one or more areas where you think the instructor could improve.

Comments
Too much strict on requirement sometimes with less information on exercises, making really difficult the resolution of problem.
Synch sessions were useful but somewhat disorganized
